

## Help Enhance Knowledge About Vaccine Safety - Every Life Counts

If you recognise the potential of vaccines to help relieve the world of serious disease and untold suffering, please join us to help enhance justified public trust in vaccines.

We rely on donations from people like you.

- If you are the **parent of a child**, you want to know that what your child is receiving will benefit him or her and not cause any harm.
- If you are the **regulator responsible for licensing vaccines** for entire populations you need information you can trust.
- If you are an **official of an international health organisation**, you want immunisation safety information you can trust as you make your decisions about where to allocate resources.
- If you are a **vaccine manufacturer**, your long-term success depends on you delivering the safest possible effective vaccines.

Vaccines are distributed faster and to larger populations than ever. Reliable safety information has to be available for decision makers to continue, modify or terminate these new programs. Ideally, this information should be available to them at a moment's notice. As the number of available vaccines increases and the pace at which they are rolled out quickens, vaccine safety research must keep pace. All activities in vaccine safety research take time the researcher does not have if working alone. The Brighton Collaboration's work begins here. Help the Brighton Collaboration with your donation when it is most needed. Your donation will work towards protecting people from vaccine-preventable diseases. The Brighton Collaboration provides essential vaccine safety resources that only an independent body of scientists can provide. To maintain the independence and rigorous scientific safety research, they rely on funds from people and organisations.

Your donation will work towards protecting people from vaccine-preventable diseases. We provide essential vaccine safety resources that only an independent body of scientists can provide. To maintain our independence and rigorous scientific safety research, we rely on funds from people and organisations. The Foundation accepts contributions and/or grants from scientific funding agencies, internationally recognised scientific health and particularly vaccine stakeholder organisations, charitable agencies and individual donors and other sources supporting vaccine research. The Foundation charter does not permit direct funding from individual manufacturers.
